

## Case History

### High Level Cleaning Project at Large Industrial premises in Christchurch

Rainbow International Christchurch were appointed to carry out a high level clean at 2 60,000sq ft units in the Christchurch area. Our IPAF qualified technicians used high level access equipment to complete all works required. We used a pure water cleaning system to eliminate any chemicals being used on the buildings. Once we were given authority we spent 3 weeks carrying out all works required. Our scope of works entailed:

- Exterior clean of all cladding
- Gutter and vegetation clearance
- Use of high level access equipment
- Fitting of new bird deterrent spikes around the lighting and signage where required
